State Classified

The 2021 CSU Employee Climate Survey is a component of a biennial assessment conducted in the fall to assess employee perceptions related to their department/unit, division/college, and CSU. The 2021 is based on the survey developed in 2018 by the Assessment Group for Diversity Issues, a CSU service committee. The 2021 instrument focuses on employment themes of culture, leadership accountability, respect, favoritism, communication, discriminatory attitudes, and performance review.

Most items use a five-point Likert scale (1 = Strongly Disagree, 2 = Disagree, 3 = Neither Agree nor Disagree, 4 = Agree, 5 = Strongly Agree). Tables appearing in Frequencies of Results show the complete set of survey frequencies by theme (e.g., Work Culture, Performance Review, Leadership Accountability, etc.) as well as the total (weighted population). On many of the survey items, respondents could choose a non-evaluative response such as "Don't know," "NA" or "Prefer not to disclose." These responses, along with missing data, have been excluded from all analyses. Additionally, an overall index score representing the average percent agree (e.g., Work Culture Overall) appears within each table. For example, the Work Culture theme includes 13 individual survey items. If an employee selected "agree" or "strongly agree" to 9 out of the 13 items, their Work Culture index score to be calculated. An overall index score represents the average of the individual index scores or all employees included in the group or category.

The findings in this report apply to State Classified. Additional information regarding response rates and data weighting can be found in the overall report of results for the University, available under separate cover.

Frequencies of Results

The following tables display the complete set of frequencies for each survey question asked on the survey. Percentages and proportions of respondents providing a given response are abbreviated to "Pct" and the number of respondents representing the total weighted division population are also provided under the abbreviated heading of "Pop."

Comparisons by Gender

The gender of respondents is based on responses to the multiple response gender survey question (Table 18). If a respondent selected "Man" alone or in combination with "Cisgender," they are coded a "Man." Similarly, if a respondent selected "Woman" alone or in combination with "Cisgender," they are coded as "Woman." If a respondent selected any combination of "Agender," "Non-binary/Gender Queer/Gender Non-Conforming," "Trans/Transgender," "Trans Man/Masculine," "Trans Woman/Feminine," and/or "Two Spirit" they are coded as "Trans, non-binary, or non-conforming" (T/NB/NC). Gender could not be determined for respondents who skipped the question or selected "Prefer not to disclose;" these respondents are excluded from these analyses.

Percent "Agree" or "Strongly agree"

The reported population reflects the number of respondents who answered the survey item.^{1,2,3}

1. Results are based on two-sided tests assuming equal variances. For each significant pair, the key of the smaller category appears in the category with the larger mean. Significance level for upper case letters (A, B, C): .05

2. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Comparisons by Racially Minoritized Status

Racially minoritized status is based on responses to the multiple response race and ethnicity survey question (Table 20). If a respondent selected only one race and that one race was Asian, Black, Hispanic or Latinx, Native American or Alaska Native or First Nations, or Native Hawaiian or Other Pacific Islander, or they selected "The race/ethnicity I most closely align with is not listed," they are coded as racially minoritized. If a respondent selected more than one race in any combination, they are coded as racially minoritized. Racially minoritized status could not be determined for respondents who skipped the question or selected "Prefer not to disclose;" these respondents are excluded from these analyses.

2. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

3. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

a. Results are based on two-sided tests assuming equal variances. For each significant pair, the key of the smaller category appears in the category with the larger mean. Significance level for upper case letters (A, B, C): .05

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

Comparisons by Year

In order to yield meaningful longitudinal comparisons, the 2018 survey sample was weighted using similar methods as 2021. Consequently, 2018 results will not match prior reports because of this methodological adjustment. Only survey items asked in both 2018 and 2021 are presented in the following tables.
